ARRAY

1. Find the largest number in an array

```java
package Task.com;

public class LargestNumber {
    public static void main(String[] args) {
        int[] arr = {10, 25, 5, 40, 15};

        int largest = arr[0];

        for (int i = 1; i < arr.length; i++) {
            if (arr[i] > largest) {
                largest = arr[i];
            }
        }

        System.out.println("Largest number: " + largest);
    }
}
```

```
Console  Install Java 27 Support
<terminated> LargestNumber [Java Application] C:\Users\Suba\.p2\pool\plugins\org.eclipse.justj.openjdk.hotspo
Largest number: 40
```

2. Find the smallest number in an array

```java
package Task.com;

public class SmallestNumber {
    public static void main(String[] args) {
        int[] arr = {10, 25, 5, 40, 15};

        int smallest = arr[0];

        for (int i = 1; i < arr.length; i++) {
            if (arr[i] < smallest) {
                smallest = arr[i];
            }
        }

        System.out.println("Smallest number: " + smallest);
    }
}
```

```
Console  Install Java 27 Support
<terminated> SmallestNumber [Java Application] C:\Users\Suba\.p2\pool\plugins\org.eclipse.justj.openjdk.hotsp
Smallest number: 5
```

3. Count even and odd numbers in an array

```java
package Task.com;

public class EvenOddCount {
    public static void main(String[] args) {
        int[] arr = {10, 15, 20, 25, 30, 7};

        int even = 0;
        int odd = 0;

        for (int i = 0; i < arr.length; i++) {
            if (arr[i] % 2 == 0) {
                even++;
            } else {
                odd++;
            }
        }

        System.out.println("Even numbers count: " + even);
        System.out.println("Odd numbers count: " + odd);
    }
}
```

```
Even numbers count: 3
Odd numbers count: 3
```

4. Count positive numbers, negative numbers and zeros

```java
package Task.com;

public class PositiveNegativeZero {
    public static void main(String[] args) {
        int[] arr = {10, -5, 0, 20, -8, 0, 7};

        int positive = 0;
        int negative = 0;
        int zero = 0;

        for (int i = 0; i < arr.length; i++) {
            if (arr[i] > 0) {
                positive++;
            } else if (arr[i] < 0) {
                negative++;
            } else {
                zero++;
            }
        }

        System.out.println("Positive numbers: " + positive);
        System.out.println("Negative numbers: " + negative);
        System.out.println("Zeros: " + zero);
    }
}
```
